

Trinity Favazza

📍 Country	United States
@ Email	angel.favazza@uticak12.org
📷 Field photo(s) upload:	
📝 Fun facts about this species:	Kids would love to know that Green Frogs can actually change their skin color slightly to blend in with their surroundings or to absorb heat. They also have up to six different types of calls, and some can even survive freezing during the winter and thaw back to life in the spring!
<input checked="" type="checkbox"/> I agree that ASA may use my text and photos in The Ribbit Report (with credit).	<input checked="" type="checkbox"/>
✍️ Optional quote:	"Saving amphibians means saving our planet's future."
≡ Photo captions & credits:	Tom Favazza took this photo at Holland Ponds, Michigan. Tom Favazza took this photo of Trinity Favazza in the field.
≡ Primary species that you work with:	The primary species I work with is the Green Frog (<i>Lithobates clamitans</i> , also known as <i>Rana clamitans</i>).
📷 Species photo(s) upload:	
✍️ What do you love most about your work?	What excites me most about working with amphibians is that they're incredibly cool creatures and serve as important indicator species that help scientists understand the health of ecosystems.
✍️ Why is this amphibian special	They're special to me because they're so common around the lakes and ponds of Michigan—places I've always

to you?

loved exploring. Even though they're a familiar sight, I've always been fascinated by them.
